Post Event – The Power of AI Workshop

‘The transformative power of AI in creating entirely new methods for advancing charitable mission’

AI Confident believe AI can create a more equitable society, empowering leaders to make confident, informed decisions about AI's potential.

Their mission is to help schools, nonprofits, and SMEs understand the broader implications of the AI revolution and foster a culture that harnesses its potential responsibly while managing associated risks.

Organisations that could benefit the most, often lack the capacity for innovative, responsible AI deployment. This workshop will cover the following

- What's going on in the world of AI?
- What's changing already, and what's going to change in the coming months?
- How do charities set themselves up to respond to these changes with confidence?

Please note that this additional free AI workshop is available only to attendees staying on from MVA's AGM event.
